

Basic Multifunction DAQ

16-bit, 200 kS/s, 16 Analog Inputs

NI PCI-6013, NI PCI-6014

- 16 analog inputs at up to 200 kS/s, 16-bit resolution
- Up to 2 analog outputs at up to 10 kS/s, 16-bit resolution
- 8 digital I/O lines (TTL/CMOS); two 24-bit counter/timers
- Digital triggering
- 4 analog input signal ranges
- NI-DAQ driver simplifies configuration and measurements

Operating Systems

- Windows 2000/NT/XP
- Others such as Linux and Mac OS X (page 187)

Recommended Software

- LabVIEW
- LabWindows/CVI
- Measurement Studio
- VI Logger

Other Compatible Software

- Visual Basic, C/C++, and C#

Driver Software (included)

- NI-DAQ 7

Calibration Certificate Included

See page 21.

Family	Bus	Analog Inputs	Input Resolution	Max Sampling Rate	Input Range	Analog Outputs	Output Resolution	Output Rate	Output Range	Digital I/O	Counter/Timers	Triggers
NI 6013	PCI	16 SE/8 DI	16 bits	200 kS/s	±0.05 to ±10 V	0	—	—	—	8	2, 24-bit	Digital
NI 6014	PCI	16 SE/8 DI	16 bits	200 kS/s	±0.05 to ±10 V	2	16 bits	10 kS/s	±10 V	8	2, 24-bit	Digital

¹10 kS/s maximum when using the single DMA channel for analog out put. 1 kS/s maximum when using the single DMA channel for either analog input or counter/timer operations.

Table 1. NI Basic Multifunction DAQ Model Guide (See page 228 for detailed specifications.)

Overview and Applications

National Instruments basic data acquisition devices deliver economical, reliable data acquisition capabilities. These boards can be used in a broad variety of applications including:

- OEM, high-volume applications (alternative operating systems available through the NI Measurement Hardware DDK, see page 187)
- High-voltage and sensor measurements when used with NI SCC
- Continuous high-speed data logging at rates up to 200 kS/s
- Externally timed and/or triggered data acquisition

Highly Accurate Hardware Design

NI low-cost E Series DAQ devices include the following features and technologies:

Temperature Drift Protection Circuitry – Designed with components that minimize the effect of temperature changes on measurements to less than 0.0010% of reading per °C.

Resolution-Improvement Technologies – Carefully designed noise maximizes the resolution.

Onboard Self-Calibration – Precise voltage reference included for calibration and measurement accuracy. Self-calibration is completely software controlled, with no potentiometers to adjust.

NI DAQ-STC – Timing and control ASIC designed to provide more flexibility, lower power consumption, and a higher immunity to noise and jitter than off-the-shelf counter/timer chips.

NI MITE – ASIC designed to optimize data transfer for multiple simultaneous operations using bus mastering with one DMA channel, interrupts, or programmed I/O.

NI PGIA – Measurement and instrument class amplifier that guarantees settling times at all gains. Typical commercial off-the-shelf amplifier components do not meet the settling time requirements for high-gain measurement applications.

PFI Lines – Eight programmable function input (PFI) lines that can be used for software-controlled routing of intraboard digital and timing signals.

High-Performance, Easy-to-Use Driver Software

NI-DAQ is the robust driver software that makes it easy to access the functionality of your data acquisition hardware, whether you are a beginning or advanced user. Helpful features include:

Automatic Code Generation – The DAQ Assistant is an interactive guide that steps you through configuring, testing, and programming measurement tasks and generates the necessary code automatically for LabVIEW, LabWindows/CVI, or Measurement Studio.

0.2	0	0.098	0.111	0.235	0.247	-	-	-
0.1	0	0.059	0.059	0.127	0.135	-	-	-

Note: Accuracies are valid for measurements following an internal calibration. Measurement accuracies are listed for operational temperatures within $\pm 1^{\circ}\text{C}$ of internal calibration temperature and $\pm 10^{\circ}\text{C}$ of external or factory-calibration temperature. One-year calibration interval recommended. The Absolute Accuracy at Full Scale calculations were performed for a maximum range input voltage (for example, 10 V for the ± 10 V range) after one year, assuming 100 pt averaging of data.*Smallest detectable voltage change in the input signal at the smallest input range.

Table 3. NI Basic Multifunction DAQ Analog Output Absolute Accuracy Specifications

Cleaner Code Development – Basic and advanced software functions have been combined into one easy-to-use yet powerful set to help you build cleaner code and move from basic to advanced applications without replacing functions.

High-Performance Driver Engine – Software-timed single-point input (typically used in control loops) with NI-DAQ achieves rates of up to 50 kHz. NI-DAQ also delivers maximum I/O system throughput with a multithreaded driver.

Test Panels – With NI-DAQ, you can test all of your device functionality before you begin development.

Scaled Channels – Easily scale your voltage data into the proper engineering units using the NI-DAQ measurement-ready virtual channels by choosing from a list of common sensors and signals or creating your own custom scale.

LabVIEW Integration – All NI-DAQ functions use the waveform data type, which carries acquired data and timing information directly into more than 400 LabVIEW built-in analysis routines for display of results in engineering units on a graph.

Visit ni.com/oem for information on our quantity discounts.

Recommended Accessories

Signal conditioning is required for sensor measurements or voltage inputs greater than 10 V. NI offers several signal conditioning options. See Table 4 below for more information:

Sensor/Signals (>10 V)				Page
System Description	DAQ Device	Signal Conditioning	Page	
Low-Cost, Portable	PCI-6013/14	SCC	251	

Signals (<10 V) ¹				Page
System Description	DAQ Device	Terminal Block	Cable	Page
Shielded	PCI-6013/14	SCB-68	SH6868-EP	214
Low-Cost	PCI-6013/14	CB-68LP	R6868	214

¹ Terminal Blocks do not provide signal conditioning (ie. filtering, amplification, isolation, etc.), which may be necessary to increase the accuracy of your measurements.

Multifunction DAQ Cable and Accessory Selection Guides

NI Cable Design Advantages

The SH68-68-EP cable is the most commonly used E Series and S Series cable. The cable is designed to work specifically with the NI Multifunction DAQ devices to preserve signal integrity through these technologies:

A variety of cabling and accessory options are available for your needs. Use the following tables to choose the most appropriate cables and accessories. To determine which Multifunction DAQ device best fits your needs, please see page 189.

Figure 2. NI offers a wide variety of cable and accessory options, such as the SH68-68-EP cable and the BNC-2110 terminal block.

Platform	Shielding	Connect to ...	Cable	Adapter	Accessory
PCI/PXI/USB/FireWire	Shielded	SCC portable signal conditioning per channel	SH68-68-EP	—	SC-2345 and modules, page 251
	Shielded	SCXI high-performance signal conditioning	SCXI-1349	—	SCXI Chassis and Modules, page 270
	Shielded	Screw terminals ¹	SH68-68-EP or SH68-68R1-EP	—	SCB-68
	Shielded	BNC terminal block	SH68-68-EP	—	BNC-2110, BNC-2120, BNC-2090
	Shielded	50-pin connector	SH6850	—	CB50, custom or 3rd party
	Shielded	Configurable connectivity box	SH68-68-EP	—	CA-1000, page 351
	Unshielded	Screw terminals ¹	R6868	—	TBX-68, CB-68LP, CB-68LPR, DAQ signal accessory
	Unshielded	50-pin connector	R6850	—	CB50, custom or 3rd party
PXI only	Shielded	Front-mounted screw terminals	N/A	—	TB-2705
PCMCIA					
	Shielded	Screw terminals ¹	SHC68-68-EP or SHC68U-68-EP ²	—	SCB-68, CA-1000
	Shielded	50-pin connector	SHC68-68-EP or SHC68U-68-EP ²	68M-50F MIO	CB50, custom or 3rd party
	Unshielded	Screw terminals ¹	RC68-68	—	TBX-68, CB-68LP, CB-68LPR, DAQ signal accessory
	Unshielded	50-pin connector	RC68-68	68M-50F MIO	CB50, custom or 3rd party

¹Unshielded cables can connect to shielded accessories and vice-versa. ²In adjacent PCMCIA slots, both cables types are required because the same cable would cause mechanical hindrance.
